Pro and Pro Control Lubrication Systems

Providing a reliable, inexpensive, and time-saving solution to your hourly, daily, and monthly lubrication needs.

With Skyhawk's easy to program, easy to install, remote mountable six point lubrication system, you will find that all of your gas, oilfield, and power plant machinery is regularly greased to your specifications while saving you from:

- Time that used to be spent regularly lubricating machinery
- Chance of equipment failure due to over or under greasing
- Risk of injury of constantly maintaining machinery
- Equipment downtime as the machinery can continue to operate while replacing grease from a remote location
- Excess expenditures spent on lubrication and maintenance

Skyhawk's Pro (battery operated) and the Pro Control (external DC power supply) Lubrication Systems provide:

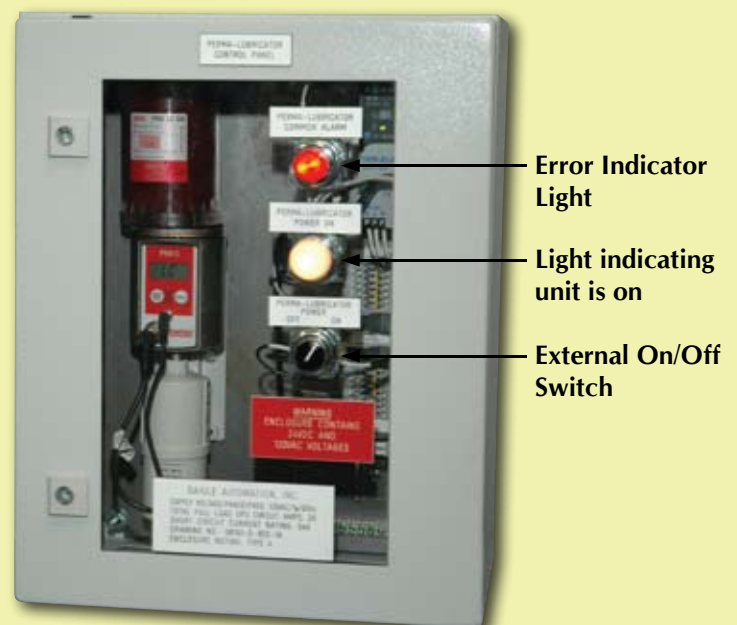

- A reliable and precise, pin protected, programmable greasing system
- Delivery of lubrication through grease lines to as many as six location points from a remote location up to 15 feet away
- A discharge rate of 24 hours up to 24 months
- On-screen diagnostics with error readings (should there be a blockage, an error message will indicate which grease line is affected)
- Continuous grease delivery to all unblocked grease lines even if one line is blocked

Skyhawk recommends that you place the Pro and Pro Control units into a protective enclosure. We offer single and double Pro enclosures as well as the Lubrication Control Panel (LCP) enclosure.

The LCP and LCP2 offer:

- A protective enclosure with a see through window for the Pro Control
- A standard plug-in electrical panel with a transformer to convert the power from AC to DC for the operation of the lubricating device
- An external on/off switch
- An external error indicator light
- An option to wire an error signal to a remote location
- Additional options on request
